

Spiral hose guards in polypropylene (PP)

Applications

Spiral hose guards are used for the protection and bundling of hydraulic and pneumatic hoses, electric cables etc. They are also useful to reduce the contact temperature of heated lines and heated hoses in applications with high temperatures. A spiral hose guard increases the security and durability of hoses, lines and cables.

Example

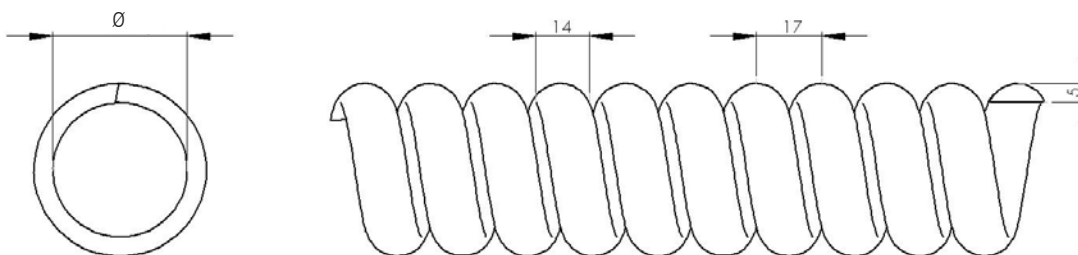

Other colours upon request !

Features and benefits

- Spiral with section in hemi-circle made of extruded polypropylene (PP) with rounded edges.
- The special geometry adapts perfectly on the hose without restricting its movement.
- High resistance to mechanical strain trough chocks, frictions, cutting edges etc.
- Very high lifespan. Recyclable. Conform to ROHS (Restriction of Hazardous Substances).
- Resistant to frost and heat. Operating temperature from -40°C to +120°C. High chemical resistance.
- Spiral hose guards can be cut to length with scissors or pincers. Easy installation due to the high flexibility.
- Standard colour black. Other colours upon request. Delivery in coils of 20 - 50 m / box or in pieces cut to length upon request.

Dimensions

Required quantity = Length of hose x Outer diameter of hose / Inner diameter of spiral hose guard
